8 questions

Test is out of 24.

Topics to know:

1. Find the inverse of a function.
2. Given an exponential function, solve for given values of a variable.
$$e^x \quad F = 100 (1.04)^{\frac{d}{12}}$$
3. Use implicit differentiation to find equations of tangent AND normal lines at a given point.
4. Log and exponential differentiation.
5. Inverse trig differentiation.
6. Two related rate questions.
