**Expectation 1-2: Determine the sample space of a probability experiment with two independent events. Determine the outcomes of two or more events.**

Explain how to find the probability of an event occurring.

What are some of the ways we can express the sample space for a probability experiment.

Show them for the events flipping a coin and then rolling a die.

**Expectation 3: Solve probability problems.**

Determine how to find the probability of 2 independent events. Give an example to illustrate.
